EDUCATION

University of California, Irvine

Expected June 2027

Bachelor of Science in Computer Science

Irvine, CA

Coursework: Object-Oriented Programming, Data Structure Implementation, Design & Analysis of Algorithms, Principles in System Design, Computer Organization, Computer Networks, Discrete Structures, Data Management, Data & Web Applications, Information Retrieval, Machine Learning & Data Mining, Linear Algebra, Probability & Statistics

EXPERIENCE

Software Engineer Intern

June 2025 – Sept 2025

MIADVG

Irvine, CA

- Built and shipped 3 production React and Next.js applications in TypeScript with Tailwind CSS serving 50,000+ combined users, delivering features from client requirements in 2-week Agile sprints
- Developed 10+ Express REST endpoints on Node.js over PostgreSQL and MySQL, cutting API latency 67% from 300ms to 100ms by collapsing 100+ per-item queries into a single JOIN
- Integrated third-party APIs spanning payments, SMS, and authentication, handling Stripe checkout with webhook order confirmation, Twilio messaging, and Google OAuth 2.0 sign-in
- Automated AWS EC2 deployment with a GitHub Actions CI/CD pipeline that ran builds and a Vitest unit test suite on each merge to main, blocking failed releases while shipping 2–3 releases weekly

Software Developer Intern

Jan 2025 – May 2025

CALIT2, University of California, Irvine

Costa Mesa, CA

- Developed a Python Flask-SocketIO backend that streamed real-time detections from 5+ camera feeds to a React security dashboard over WebSockets, sustaining 100–200ms event-delivery latency
- Cut duplicate alerts by 40% on the security dashboard with a Python pipeline that deduplicated detections via a Redis TTL cache and routed them through RabbitMQ priority queues
- Fine-tuned YOLO with PyTorch transfer learning on labeled client footage, improving validation mAP by 8 points over the stock pretrained baseline powering the real-time detection pipeline

Undergraduate Research Assistant

Jan 2024 – June 2024

University of California, Irvine

Irvine, CA

- Created Python ETL pipelines with BeautifulSoup, PyPDF2, and Pandas that cleaned and normalized thousands of UCI PDF/HTML documents into training-ready text for iGPT development
- Evaluated fine-tuned GPT-3.5 responses on UCI-specific queries to validate answer quality during early-stage iGPT development, a project that later evolved into ZotGPT for UCI students

PROJECTS

Docent | [GitHub] [Live] | *Next.js, Python, FastAPI, Pinecone, Voyage, Claude, Tavily*

Apr 2026 – July 2026

- Improved answers on complex questions with an agentic loop that splits each query into sub-questions, searches documents and the web, and merges them into one grounded answer
- Reduced hallucinations with a hand-built RAG pipeline (no LangChain) citing every source inline, shipped to production as Next.js and FastAPI services with per-IP rate limiting, Google sign-in, and pytest CI

CollabCode | [GitHub] [Live] | *React, TypeScript, Monaco, Flask-SocketIO, Redis, Postgres*

Feb 2026 – Apr 2026

- Sustained 17ms p95 sync latency with 50 concurrent clients per room by building a real-time collaborative code editor with live cursors, follow mode, and multi-file workspaces
- Implemented the React sync layer for Monaco with three-layer persistence (in-memory, Redis, PostgreSQL), plus four Claude API streaming modes and sandboxed server-side Python execution

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C++, SQL, HTML/CSS

Tools and Frameworks: React, Next.js, Node.js, Express, Flask, FastAPI, PostgreSQL, MySQL, Redis, Pinecone, Tailwind CSS, WebSockets, PyTorch, Docker, AWS (EC2), Git, Linux, RabbitMQ, GitHub Actions, pytest, Vitest

AI/ML: Retrieval-Augmented Generation (RAG), Vector search, Agentic pipelines, Fine-tuning, YOLO, Anthropic SDK
