EDUCATION

University of California, Irvine

B.S. in Computer Science

Expected June 2027

EXPERIENCE

Software Engineer Intern

June 2025 – Sept 2025

MIADVG

Los Angeles, CA

- Shipped and maintained 3 production React and TypeScript web applications with Tailwind CSS, used across products with 10,000+ combined users and features delivered in 2-week Agile sprints
- Developed Express REST APIs on Node.js backed by PostgreSQL and MySQL, supporting OAuth 2.0 flows and third-party integrations such as Stripe and Twilio
- Automated AWS EC2 deployment with a GitHub Actions CI/CD pipeline that ran builds and a Vitest unit test suite on each merge to main, blocking failed releases while shipping 2–3 releases weekly

Software Developer Intern

Jan 2025 – May 2025

CALIT2, University of California, Irvine

Costa Mesa, CA

- Developed a Python Flask-SocketIO backend that streamed real-time detections from 5+ camera feeds to a React security dashboard over WebSockets, sustaining 100–200ms event-delivery latency
- Built a Python pipeline that removed duplicate detections with a Redis TTL cache and routed fire, vehicle, and suspicious-activity events through RabbitMQ priority queues
- Fine-tuned YOLO with PyTorch transfer learning on client footage, improving validation mAP by 8 points over the stock baseline

Undergraduate Research Assistant

Jan 2024 – June 2024

University of California, Irvine

Irvine, CA

- Created Python ETL pipelines with BeautifulSoup, PyPDF2, and Pandas that cleaned and normalized thousands of UCI PDF/HTML documents into training-ready text for iGPT development
- Evaluated fine-tuned GPT-3.5 responses on UCI-specific queries during early-stage iGPT development, a project that later evolved into ZotGPT for UCI students

PROJECTS

CollabCode | [GitHub] [Live] | *React, TypeScript, Monaco, Flask-SocketIO, Redis, PostgreSQL* Feb 2026 – Apr 2026

- Built a real-time collaborative code editor with live cursors, follow mode, and multi-file workspaces, benchmarked at 17ms p95 sync latency with 50 simulated clients per room
- Implemented the React sync layer for the Monaco editor, applying edits from other users in real time without disrupting local typing or cursor position
- Designed layered storage with Redis for active room state and PostgreSQL persistence, keeping rooms and files intact across restarts
- Integrated four Claude API streaming modes that generate, fix, explain, and improve code, plus server-side Python execution with output capture and a 5s timeout

Briefly | [GitHub] [Live] | *Cloudflare Workers, Durable Objects, Workers AI, Llama 3.3*

Apr 2026 – Present

- Built an AI standup tool on Cloudflare Workers with custom SSE streaming, forwarding Llama 3.3 tokens to the client live while capturing full responses server-side
- Designed Durable Objects storage to isolate per-user and per-team standup state, persisting recent updates and generating weekly summaries through a separate Llama inference request

SKILLS

Languages: Python, JavaScript, TypeScript, Java, C++, SQL, HTML, CSS

Frameworks & Libraries: React, Vite, Node.js, Express, Flask, Tailwind CSS, WebSockets, PyTorch, BeautifulSoup, PyPDF2, Pandas

Cloud & Infra: AWS (EC2), Cloudflare Workers, Docker, RabbitMQ, GitHub Actions, CI/CD, Git

Databases: PostgreSQL, MySQL, Redis, SQLite

AI/ML: YOLO, LLM integration, Fine-tuning, Transfer learning, Anthropic SDK
