EDUCATION

University of California, Irvine

B.S. in Computer Science

Expected June 2027

EXPERIENCE

Software Engineer Intern

June 2025 – Sept 2025

MIADVG

Los Angeles, CA

- Shipped and maintained 3 production React and TypeScript web applications with Tailwind CSS, serving 10,000+ combined users with features delivered in 2-week Agile sprint cycles
- Developed REST APIs with Express on Node.js, backed by PostgreSQL and MySQL, powering OAuth authentication and 10+ third-party integrations including Stripe and Twilio
- Automated AWS EC2 deployment via a GitHub Actions CI/CD pipeline running build, Jest tests, and deploy on each merge to main, blocking releases on failures while shipping 2-3 releases weekly

Software Developer Intern

Jan 2025 – May 2025

CALIT2, University of California, Irvine

Costa Mesa, CA

- Developed a Python Flask-SocketIO backend that streamed real-time detections from 5+ GPU-accelerated cameras to a React security dashboard over WebSockets, sustaining 100-200ms latency
- Fine-tuned YOLO with PyTorch transfer learning on client footage, improving mAP by 8 points over the stock baseline for production imaging conditions
- Implemented a Python event-processing pipeline that prioritized fire, vehicle, and suspicious-activity detections by severity, filtered duplicates, and persisted events to PostgreSQL for the dashboard

Undergraduate Research Assistant

Jan 2024 – June 2024

University of California, Irvine

Irvine, CA

- Created Python ETL pipelines that extracted and cleaned thousands of UCI documents from PDF and HTML sources into training-ready text for iGPT, later released as ZotGPT
- Evaluated the fine-tuned GPT-3.5 on UCI-specific queries during early-stage iGPT development, which later became ZotGPT serving 36,000+ undergraduates

PROJECTS

CollabCode [GitHub] [Live] | *React, TypeScript, Monaco, Flask-SocketIO, Redis, PostgreSQL* Feb 2026 – Apr 2026

- Built a real-time collaborative code editor with live cursors, follow mode, and multi-file workspaces, sustaining 50 concurrent clients per room at 17ms p95 sync latency
- Implemented the React sync layer for the Monaco editor, applying edits from other users in real time without disrupting local typing or cursor position
- Designed layered storage with Redis write-through to PostgreSQL, keeping rooms and files intact across restarts, with SQLite snapshots for version history
- Integrated four Claude API streaming modes that generate, fix, explain, and improve code, plus server-side Python execution with output capture and a 5s timeout

Briefly [GitHub] [Live] | *Cloudflare Workers, Durable Objects, Workers AI, Llama 3.3*

Apr 2026 – Present

- Built an AI standup tool on Cloudflare Workers with custom SSE streaming, forwarding Llama 3.3 tokens to the client live while capturing full responses server-side
- Designed Durable Objects storage with separate per-user and per-team data, keeping the most recent standups for each, plus weekly summaries generated by a second Llama call

SKILLS

Languages: Python, JavaScript, TypeScript, Java, C++, SQL, HTML, CSS

Frameworks & Libraries: React, Node.js, Express, Flask, Tailwind CSS, WebSockets, PyTorch, NumPy, Pandas

Cloud & Infra: AWS (EC2), Cloudflare Workers, Docker, GitHub Actions, CI/CD, Git

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQLite

AI/ML: YOLO, LLM integration, Fine-tuning, Transfer learning, Anthropic SDK
